离散数学概述

魏恒峰

hfwei@nju.edu.cn

2021 年 03 月 04 日

分班教学
(与计算机系赵建华老师)

授课内容可能有出入, 不影响考试与成绩分配

平时作业 *vs.* 期中测试 *vs.* 期末测试

$$3 : 3 : 4$$

$$4 : 3 : 3$$

弹性制

每周四晚上发布作业　　下周四 23:55 前提交作业

每次作业按 10 分计算

迟交: 周四前向助教登记, 可延长两天, 总分 8 分

(**作业助教:** 裴一凡、戴若石、肖江)

“教学立方”课程邀请码：PLD8QKTZ

约法三章

非必要，不点名

非必要，不迟到

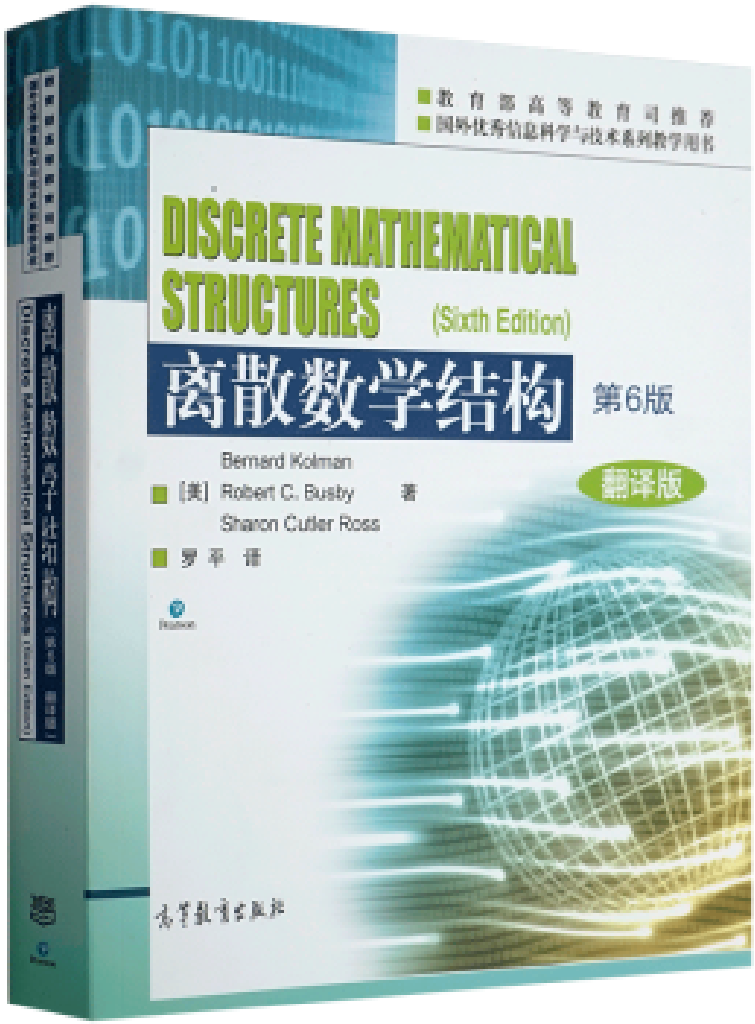
非必要，不迟到

尽量吃早餐，但不可以在教室吃早餐

~~非必要~~，不抄袭；一经发现，后果严重

~~非必要~~，不抄袭；一经发现，后果严重

当次作业计零分；总评扣十分



教育部高等教育司推荐

离散数学

离散数学

研究**离散对象及其关系**的数学分支 (**大杂烩**)

四大主题: 逻辑、集合论、图论、抽象代数 (群论)

支流遍布: 组合与计数、数论、(离散) 概率

关于离散数学, 学长纷纷表示:

我太难了

啥用没有

真得有那么难吗?

真得有那么难吗?

确实蛮难的: 知识点多而分散

真得没啥用吗?

真得没啥用吗?

太基础, 用了但不自觉 (逻辑)

浅尝辄止, 想用但用不上 (群论)

将离散数学看作一门语言，一套工具

培养形式化描述问题的能力

培养做严格证明的能力

Show me your proof...
whisper

Theorem (Dov Jarden (1953))

$$\exists a, b \in \mathbb{R} \setminus \mathbb{Q} : a^b \in \mathbb{Q}.$$

Theorem (Dov Jarden (1953))

$$\exists a, b \in \mathbb{R} \setminus \mathbb{Q} : a^b \in \mathbb{Q}.$$

$$\sqrt{2} \in \mathbb{R} \setminus \mathbb{Q}$$

Theorem (Dov Jarden (1953))

$$\exists a, b \in \mathbb{R} \setminus \mathbb{Q} : a^b \in \mathbb{Q}.$$

$$\sqrt{2} \in \mathbb{R} \setminus \mathbb{Q}$$

$$\sqrt{2}^{\sqrt{2}}$$

Theorem (Dov Jarden (1953))

$$\exists a, b \in \mathbb{R} \setminus \mathbb{Q} : a^b \in \mathbb{Q}.$$

$$\sqrt{2} \in \mathbb{R} \setminus \mathbb{Q}$$

$$\sqrt{2}^{\sqrt{2}}$$

$$(\sqrt{2}^{\sqrt{2}})^{\sqrt{2}}$$

Theorem (Dov Jarden (1953))

$$\exists a, b \in \mathbb{R} \setminus \mathbb{Q} : a^b \in \mathbb{Q}.$$

$$\sqrt{2} \in \mathbb{R} \setminus \mathbb{Q}$$

$$\sqrt{2}^{\sqrt{2}}$$

$$(\sqrt{2}^{\sqrt{2}})^{\sqrt{2}}$$

Q：这是构造性证明吗?

Theorem (Dov Jarden (1953))

$$\exists a, b \in \mathbb{R} \setminus \mathbb{Q} : a^b \in \mathbb{Q}.$$

$$\sqrt{2} \in \mathbb{R} \setminus \mathbb{Q}$$

$$\sqrt{2}^{\sqrt{2}}$$

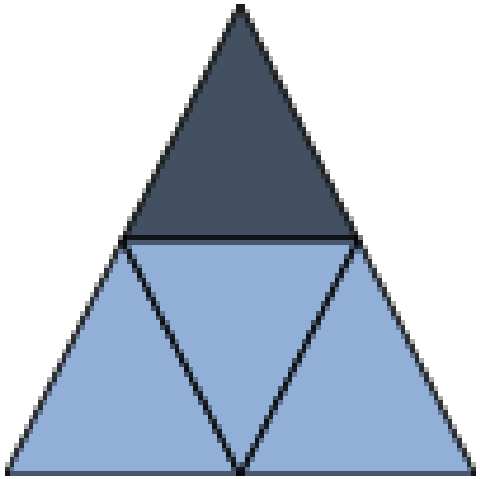
$$(\sqrt{2}^{\sqrt{2}})^{\sqrt{2}}$$

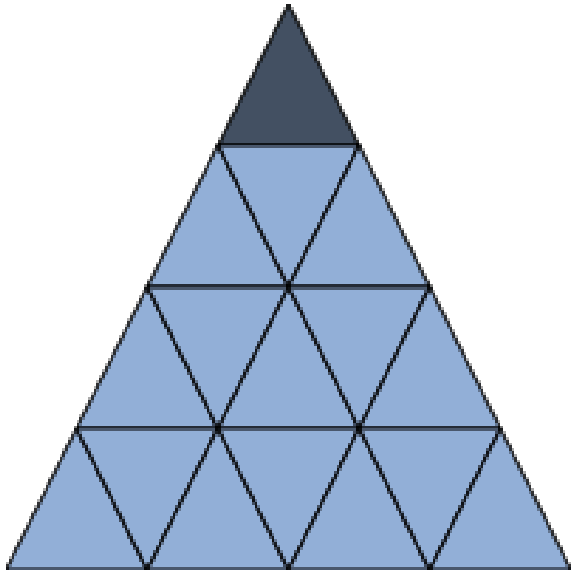
Q：这是构造性证明吗？这是反证法吗？

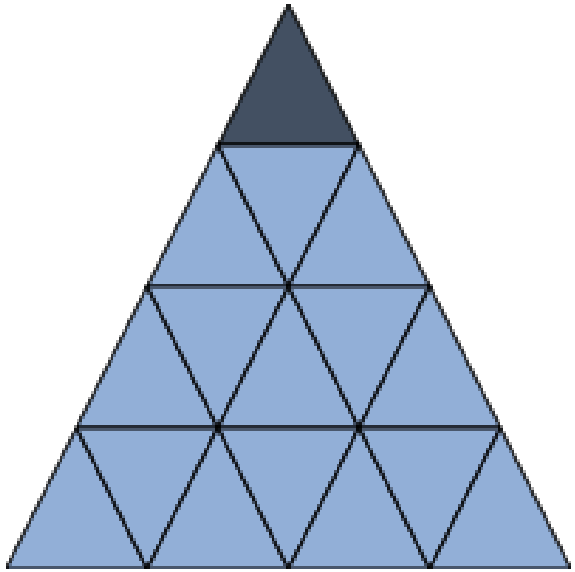
Tiling Puzzle

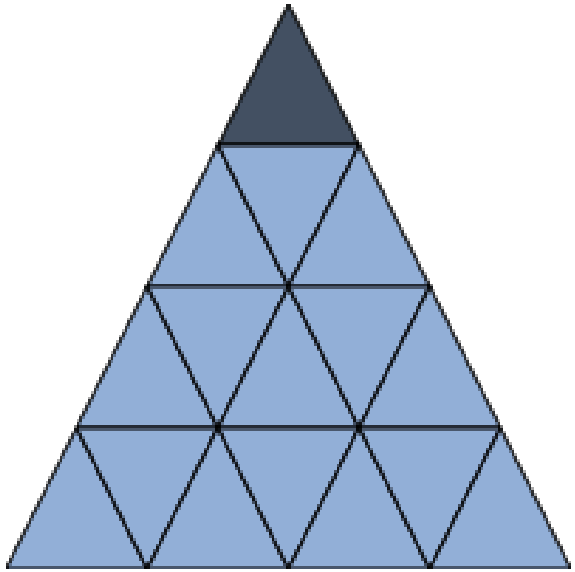
Suppose n is a positive integer. An equilateral triangle is cut into 4^n congruent equilateral triangles, and one corner is removed.

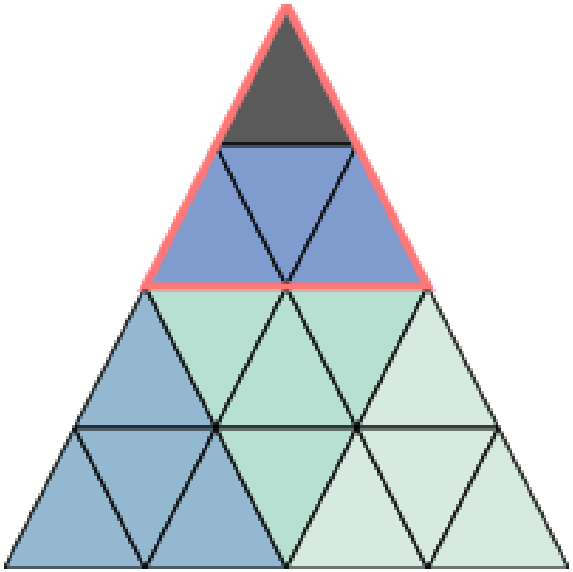
Show that the remaining area can be covered by tiles below

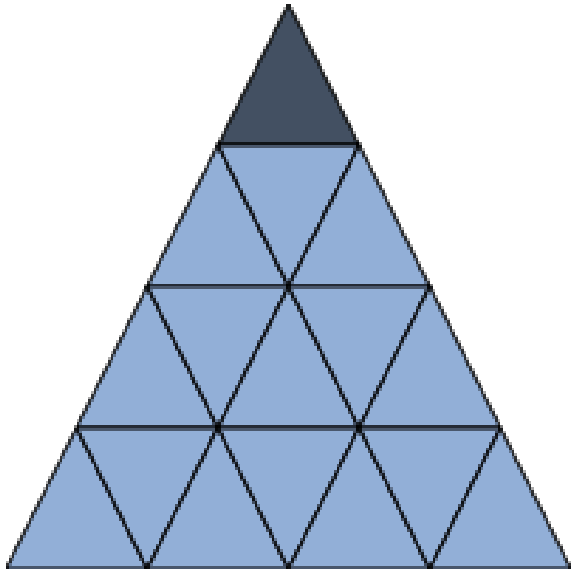


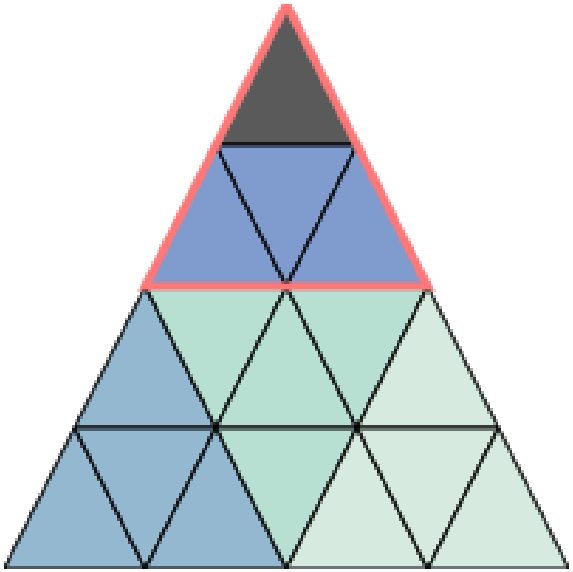


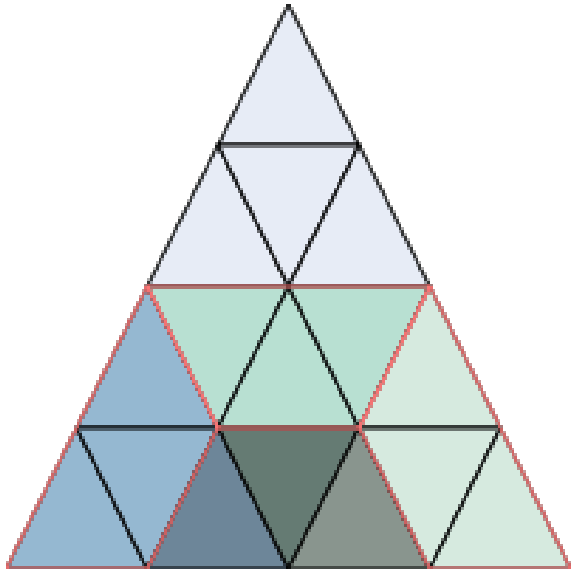












Base Case:

Induction Hypothesis:

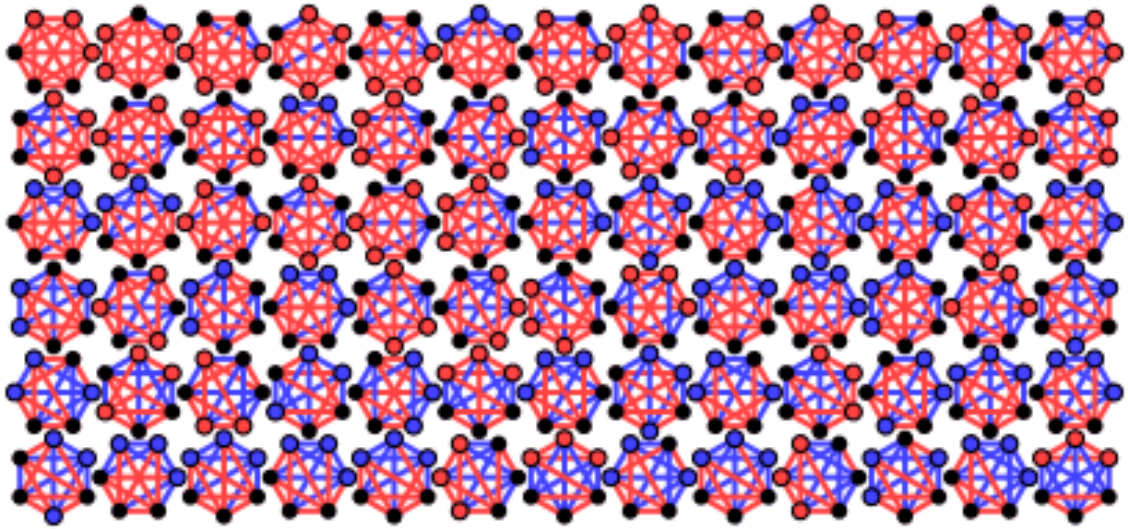
Induction Step: . . . by induction hypothesis . . .

Theorem on Friends and Strangers

At any party with at least 6 people, there are 3 people who are all either mutual acquaintances or mutual strangers.

Theorem on Friends and Strangers

At any party with at least 6 people, there are 3 people who are all either mutual acquaintances or mutual strangers.



In Terms of **Graph Theory**.

(Is there a monochromatic triangle in any 2-coloring of K_6?)

Theorem on Friends and Strangers

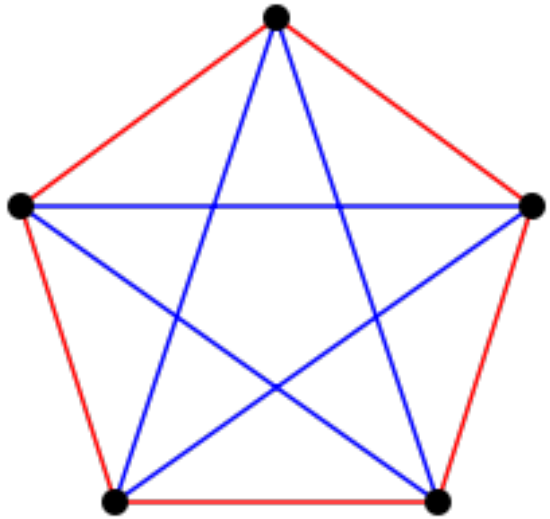
Is there a monochromatic triangle in any 2-coloring of K_6?

Theorem on Friends and Strangers

Is there a monochromatic triangle in any 2-coloring of K_5?

Theorem on Friends and Strangers

Is there a monochromatic triangle in any 2-coloring of K_5?



Ramsey theory

How **big** must the **structure** be

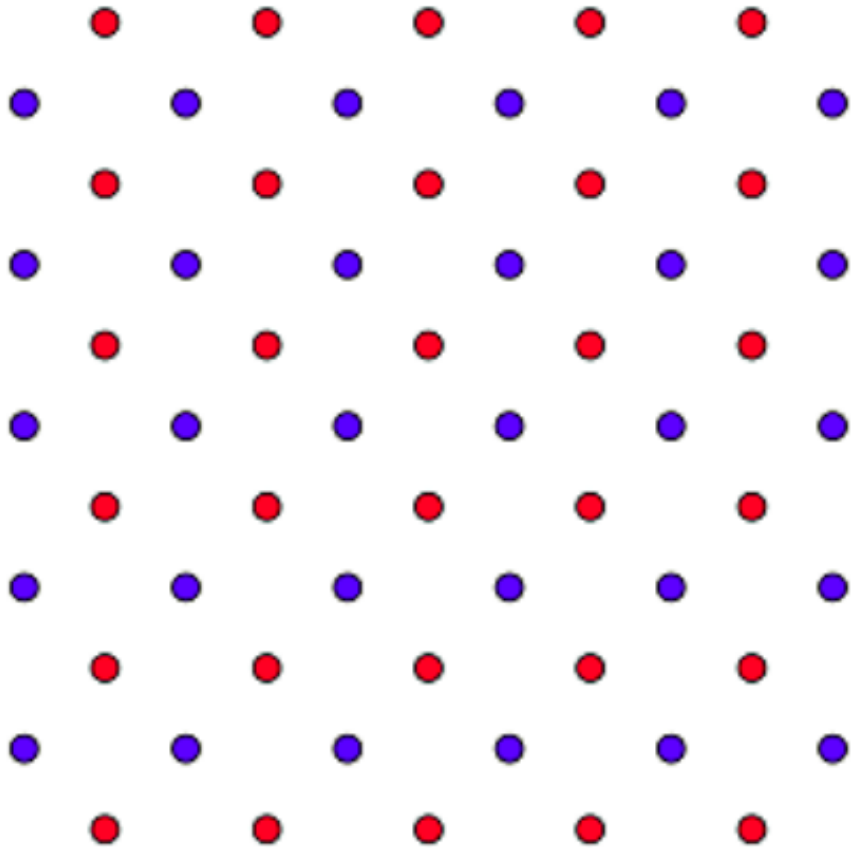
to ensure that it has a given interesting **property**?

Ramsey theory

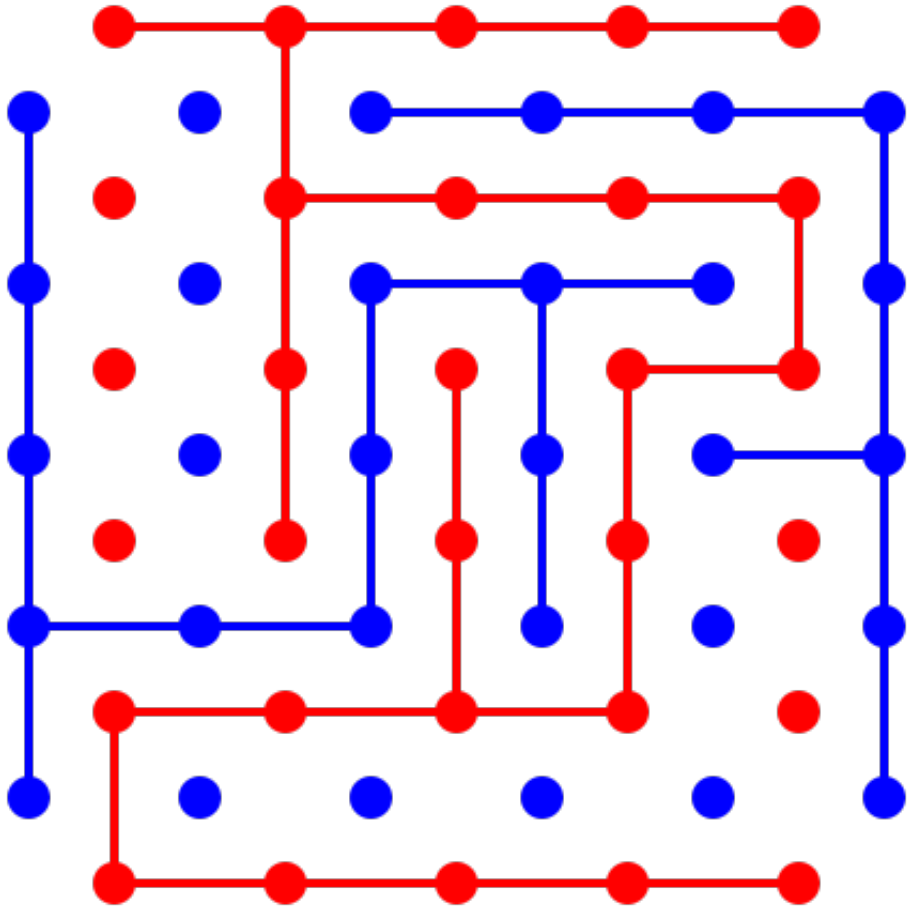
How **big** must the **structure** be

to ensure that it has a given interesting **property**?

Bridg-It Game (David Gale, 1958)



5×6 *vs.* 6×5



5×6 *vs.* 6×5

Let's Play with it!

Let's Analyze it!

Will Bridg-It **end in a tie**?

Will Bridg-It **end in a tie**?

No! By **contradiction**.

Does **Player 2** have a **winning strategy**?

Does **Player 2** have a **winning strategy**?

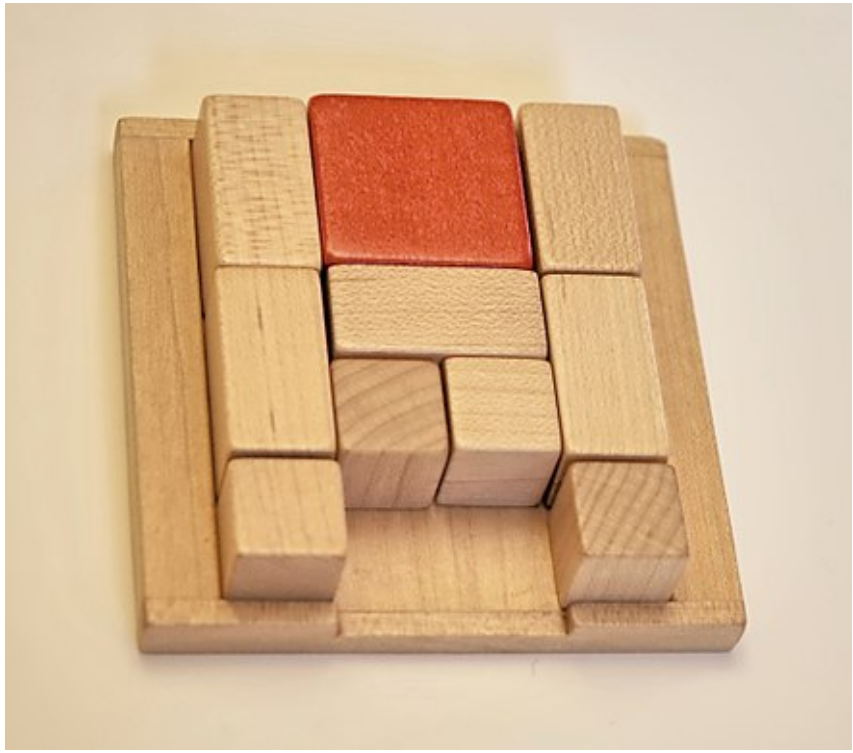
No! By the **strategy stealing argument**.

Does **Player 1** have a **winning strategy**?

Does **Player 1** have a **winning strategy**?

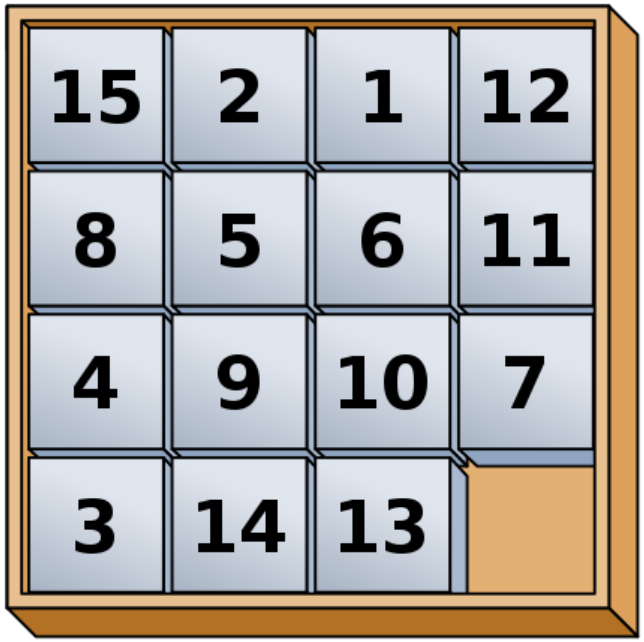
Yes! It uses **spanning trees** in **graph theory**.

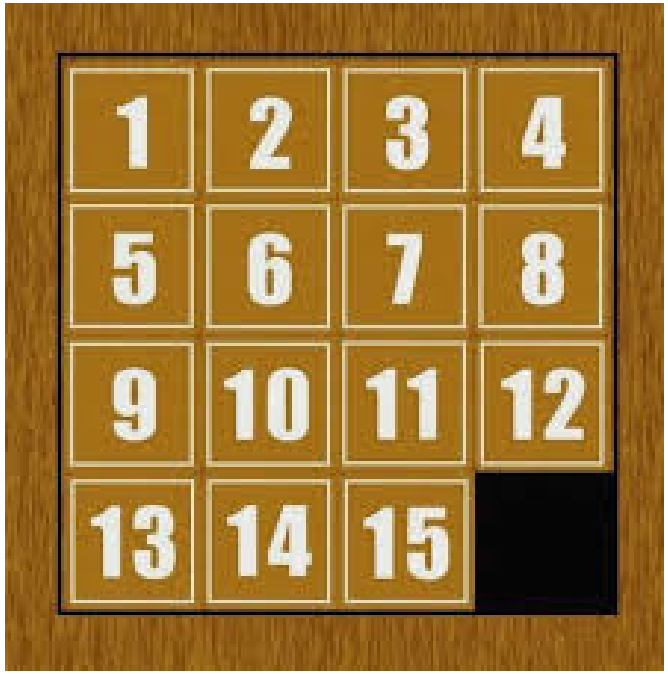
Klotski Puzzle (华容道)

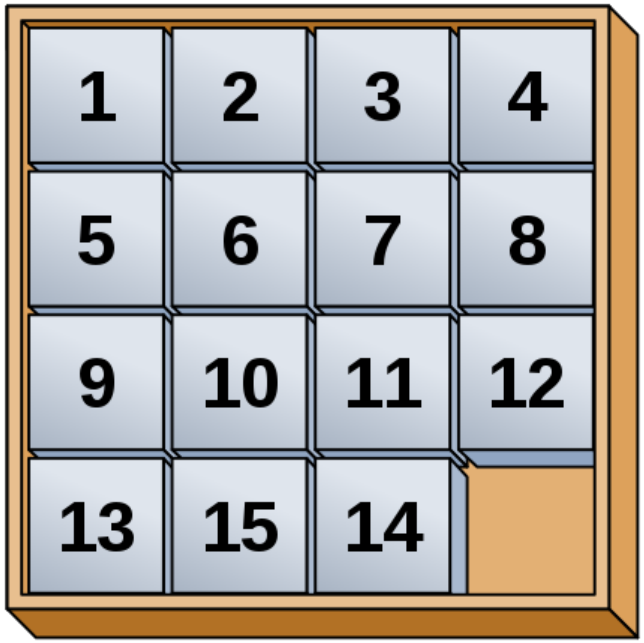


Klotski Puzzle (华容道; 中国版本)

15 Puzzle (数字华容道)







Is it solvable?

How to solve it?

How to solve it?

It uses **permutation groups** in **group theory**.

The Stable Marriage Problem (SMP)

Given n men and n women, where each person has a preference list, to establish a stable marriage.

Men $\{x, y, z, w\}$	**Women** $\{a, b, c, d\}$
$x : a > b > c > d$	$a : z > x > y > w$
$y : a > c > b > d$	$b : y > w > x > z$
$z : c > d > a > b$	$c : w > x > y > z$
$w : c > b > a > d$	$d : x > y > z > w$

The Stable Marriage Problem (SMP)

Given n men and n women, where each person has a preference list, to establish a stable marriage.

Men $\{x, y, z, w\}$	**Women** $\{a, b, c, d\}$
$x : a > b > c > d$	$a : z > x > y > w$
$y : a > c > b > d$	$b : y > w > x > z$
$z : c > d > a > b$	$c : w > x > y > z$
$w : c > b > a > d$	$d : x > y > z > w$

$$\{xb, yc, zd, wa\}$$

(x, a) is an unstable pair

$$\{xa, yb, zd, wc\}$$

Men $\{x, y, z, w\}$	Women $\{a, b, c, d\}$
$x : a > b > c > d$	$a : z > x > y > w$
$y : a > c > b > d$	$b : y > w > x > z$
$z : c > d > a > b$	$c : w > x > y > z$
$w : c > b > a > d$	$d : x > y > z > w$

Theorem (The Gale-Shapley Algorithm (1962))

It is always possible to solve SMP.

(1) To draw a straight line from any point to any point.

(2) To extend a finite straight line continuously in a straight line.

(3) To describe a circle with any center and radius.

(4) That all right angles are equal to one another.

(5) The parallel postulate.

Thank
You!
